Policy Formulation and Implementation in the Information Age: Towards an Evidence-based Approach to E-Government Policy Making and Change Management:

Caribbean Center for Development Administration (CARICAD) and the United Nations Department for Economic and Social Affairs (UNDESA) in collaboration with the United Nations Educational, Scientific and Cultural Organisation (UNESCO)
Agenda:

Part 1. Overview of Electronic Government
1.1 Definition of E-Government
1.2 Dimensions of E-Government
1.3 Stages of E-Government
1.4 E-Government and Public Sector Reform/Modernization
1.5 E-Government: Institutional & Human Resource Considerations
1.6 E-Government Policy Formulation
Agenda:

Part 2. Public Policy and Governance
2.1 What is Public Policy?
2.2 Politics and Public Policy
2.3 Elements of Public Policies
2.4 Characteristics of Policy-Making
2.5 How does Policy Emerge, Develop and Change?
2.6 Public Opinion and Policy
Agenda:

Part 3. Policy Stakeholder Analysis

3.1 Analyzing the Roles of Stakeholders
   - The Four “Rs”

3.2 Components of Policy Analysis

3.3 What is needed to get “community” into “policy”?
Agenda:

Part 4. Use of Evidence in E-Government Policy Formulation

4.1 The Use of Evidence in Policy Development and Implementation
4.2 Types of Evidence and How they are Used in Policy Making
4.3 Determining the Usefulness of the Evidence
4.4 EBP: A Practical Framework
4.5 Challenges to Bridging Research and Policy
4.6 Civil Society Organizations and the Use of Evidence

5.1 Stages in the Process of Managing Change

5.2 Anticipating & Managing Resistance

5.3 Creating Safety Nets

5.4 Knowledge into Action
1. Regional E-Government Strategy

- **Vision:** Better government
- **Goals:** Participation, Social Services, Transition to Knowledge Society
- **Domain:** *All* people in the Caribbean Region
- **Context:** Reform of the Public Administration in the Caribbean
- **Focus:** Institutional and Human Resources Capacity Building
Aims

- to support the advancement into information & knowledge based societies
- advance efforts towards the contribution of ICT to enhancing government operations and ultimately good governance.
- open channels for more effective citizen participation, making government more accessible
Aims

- reform of public administration, increasing the efficiency and effectiveness of public services
- making public administration leaner, flatter and capable of cross-departmental collaboration
- promote the use of ICT for Development: Bridging the “Divide”
Everything these days is DOT-COM this and DOT-COM that! I Just Can’t Stand it anymore!!!!

I know a Web-Site that can help you…
"I just found a place on the Internet where I can download all your work for free. You're fired."
1.1 E-Government…

The use of ICT (WANs, the Internet, mobile devices, etc.) that have the ability to transform relations with citizens, businesses, and other arms of government in order to achieve….

- better delivery of government services to citizens;
- improved interactions with business and industry;
- citizen empowerment through access to information;
- more efficient government management.
1.2 Dimensions of E-Government

- **G2G & G2E** – (E-Governance) application of ICT to intragovernmental operations.

- **G2C & G2B** - (E-Services) use of ICT to transform the delivery of public services from ‘standing in line’ to ‘online’, including the use of ICT to facilitate interactions with businesses.

1.3 Stages of Electronic Government
Virtual Information Space (VIS)

Traditional Market Place to Virtual Market Spaces

New approach to display & access company products &
1.3 Stages of Electronic Government

Use of Web-Based Applications
## Description of Levels of Complexity

<table>
<thead>
<tr>
<th><strong>Categories of Web Sites</strong></th>
<th><strong>Description</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Pure Static Web Site</td>
<td>Collection of static web pages created in HTML and linked together. The emphasis is on information provided and the presentation and layout of that information.</td>
</tr>
<tr>
<td>Static with Entry Form</td>
<td>Limited interactivity via fill-in Forms, used to collect information from the user, including comments or requests for information.</td>
</tr>
<tr>
<td>Dynamic Data Access via Site</td>
<td>Web Site is used as a front end for a database. Users can search and perform queries on the contents of the database.</td>
</tr>
<tr>
<td>Dynamically Created Site</td>
<td>Provides customized pages and content based on user preferences in order to foster a one-to-one marketing relationship.</td>
</tr>
<tr>
<td>Web-Based Application</td>
<td>Web sites that facilitate business processes based on software applications running in a client/server environment</td>
</tr>
</tbody>
</table>

Adapted from Powell (1998)
What good is technology if it takes six seconds to send a message but six months to get someone to act on it?!”
The IT Productivity Paradox

Annual Change in Office, Computing and Accounting Machinery Investment and Output per Worker, US 1965-95

Source: Bureau of Economic Affairs (BEA)
People vs. Process

“85% of all quality problems are a result of the processes that are in place, not because of the people who operate within the processes.”

--Joseph M. Juran
Goal: Doing the Right Things RIGHT!

“There is nothing so useless as doing efficiently that which should not be done at all.”

Peter F. Drucker
How Do We Solve A Problem?

Customer Expectations/Requirements

- Inspection
- Auditing
- Fire Fighting
- New Policy or Procedure
- Throw Money at It!

Output of the Process

Why the Gap?
What Causes A Problem?

The Process

- People
- Methods
- Environment
- Machines
- Materials

Customer Expectations/Requirements

Customer Expectations/Requirements

Why the Gap?

Output of the Process
A _______ _____ ________
completed to produce something a

Customer wants.

---

**Definition**

**Process**

A _______ of _______ completed to produce something a

Customer wants.
1.3 Stages of E-Government
‘Organizational Lag’

• Process change in organisations tends to lag behind Technological change

• Technological change:
  – are more observable/visible;
  – have higher ‘trialability’;
  – are perceived to be relatively more advantageous and less complex than administrative changes.
‘Organizational Lag’

• Between administrative or process innovation and technical or technological innovation on the other hand.

• Technological innovation should be an enabler of process innovations which lead to greater organisational efficiency and effectiveness.
1.4 ICT & the Public Sector

“The credibility of any ICT policy is to a large extent dependant on the government sector's own efforts towards the effective deployment and use of these technologies.”
1.4 ICT & the Public Sector

As a major employer, service provider and consumer, Governments are also in the best position to initiate and sustain the spread of ICT applications in the other sectors and the subsequent growth of ICT industries.”
1.4 ICT & the Public Sector

“This requires the application of ICT in all administrative procedures and related reengineering (Process Change) with a view to turn them more cost-effective and customer oriented, overcoming when necessary existing boundaries…”

Range of Organizational Change

1. **AUTOMATION**: Using technology to perform current tasks more efficiently & effectively

2. **RATIONALIZATION OF PROCEDURES**: Streamline Standard Operating Procedures; eliminate bottlenecks

3. **BUSINESS REENGINEERING**: Radical redesign of processes to improve cost, quality, service; maximize benefits of technology

4. **PARADIGM SHIFT**

1.5 E-Government: Institutional & Human Resource Considerations
Central IT Unit: Objectives

- Implementation, Coordinating, Directing & Monitoring Activities & Plans as Outlined in the National ICT Policy.
- Assist in Building Requisite ICT Capabilities within the Public Service.
Central IT Unit: Activities

• National ICT Policy & E-Government Strategy
• Process Analysis & Process Reengineering
• Develop & Enhance: Data, Information and Knowledge Management Policies and Practices
• Research – Evidence Collection and Analysis
• Training and Capacity Building
• Review and upgrade of databases/systems
• Information Management
• Upgrade and rationalize the use of the Wide Area Network Infrastructure
Streamlining of IT Positions: Classification & Nomenclature

Primary Objectives:

• Attract and retain competent & highly skilled Information Technology Professionals in Public Service;

• Ensure appropriate levels of job satisfaction and motivation, through the provision of clearly defined career paths for upward mobility, consistent with other professional streams in the Public Service.
Streamlining of IT Positions: Classification & Nomenclature

Career Progression based on:

Qualifications:
- Academic & Professional Certification

Experience:
- Demonstrated competencies, and not only years of service

Grades 5-11
Agenda:

Part 2. Public Policy and Governance
2.1 What is Public Policy?
2.2 Politics and Public Policy
2.3 Elements of Public Policies
2.4 Characteristics of Policy-Making
2.5 How does Policy Emerge, Develop and Change?
2.6 Public Opinion and Policy
Discuss:

(i) What approaches, tools and techniques you use to influence policy?

(ii) What works?

(iii) If you can, please distinguish between different parts of the policy process: agenda setting, formulation, decision, implementation, monitoring)
2.1 What is Public Policy?

- A course of government action (or inaction) taken in response to economic, social, environmental…issues.

- Public policies generally reflect society’s most important values.
2.1 Public Policy

- Those **public issues** identified for attention by government, and the **courses of action** that are taken to address them (e.g. legislation, regulation, resource allocation, etc.)

- **Public Policy-making** – The process by which governments translate their **political vision** into programmes and actions to **deliver outcomes** - desired changes in the real world
2.1 Public Policies: Impacts

• What results of policy do people “see”?

- Rules and regulations
- Public/private agencies
- People and personalities
- Projects and programmes
- Lack of policy
2.1 Public Policies: Impacts

• How do policies affect their livelihoods?

➢ Assets and people’s access to them
➢ Range & viability of options open to people
➢ Vulnerability
➢ Outcomes
2.1 Public Policy

- A *purposive* course of action that an individual or group *consistently* follows in dealing with a problem.

- Policies represent a settled course of action or pattern of activity *over time*, not a single or discrete decision.
2.1 Public Policy

Policy Uptake = Demand \textit{minus} Contestation

- Demand refers to policy maker's and societal demand
- Contestation to the degree of variance with prevailing ideology and vested interests.
“Non-policies”

- Instances of governments either ignoring a problem or choosing not to deal with it.
- Instead, private or market forces determine events.

Examples?
2.2 Politics and Public Policy

David Easton observed that politics is “the authoritative allocation of values for a society.”

Actions of policymakers can determine definitively and with the force of law which values will prevail.
### 2.2 The Political Context

<table>
<thead>
<tr>
<th>Typical actions</th>
<th>‘Surface-level’ Reforms</th>
<th>‘Deep’ Quality Enhancing Reforms</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Build infrastructure</td>
<td>• Improve management</td>
</tr>
<tr>
<td></td>
<td>• Expand bureaucracies</td>
<td>• Improve accountability</td>
</tr>
<tr>
<td></td>
<td>• Increase budgets</td>
<td>• Strengthen local control</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>

<tr>
<td></td>
<td>• Increased power for minister</td>
<td>• Loss of decision-making power</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Political response</th>
<th>‘Surface-level’ Reforms</th>
<th>‘Deep’ Quality Enhancing Reforms</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Politicians happy</td>
<td>• Administrators sabotage change</td>
</tr>
<tr>
<td></td>
<td>• Communities happy</td>
<td>• Politicians avoid reform</td>
</tr>
<tr>
<td></td>
<td>• Providers happy</td>
<td></td>
</tr>
</tbody>
</table>
2.3 Elements of Public Policies

- **Intentions** (purposes of action)
- **Goals** (stated ends to be achieved)
- **Plans** (means to achieve goals)
- **Programs** (authorized means to achieve goals)
- **Decisions** (specific actions)
- **Effects** (intended and unintended)
2.3 Elements

- **Policy Outputs**: Formal actions that governments take to pursue their goals.

- **Policy Outcomes**: The effects that policy outputs (actions) have on society.
## 2.4 Characteristics of Policy-Making

<table>
<thead>
<tr>
<th>Characteristic</th>
<th>What does that mean?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Incremental and complex</td>
<td>Policy is often based on experimentation, chance events, learning from mistakes, and a range of other influences.</td>
</tr>
<tr>
<td>Shaped by “policy narratives”</td>
<td>Different stories evolve to describe events. Some gain more authority and have more influence on policy decisions than others.</td>
</tr>
<tr>
<td>Pluralist</td>
<td>Many actors and interest groups can influence the policy process. There may be a range of mechanisms by which these different voices are heard.</td>
</tr>
<tr>
<td>Informed by actor networks</td>
<td>Certain individuals or institutions spread and maintain narratives through chains of persuasion and influence and inform policy.</td>
</tr>
<tr>
<td>Political</td>
<td>Power relations between citizens/experts/political authorities mean that policy making is not neutral. Personal politics and party politics influence policy decisions</td>
</tr>
<tr>
<td>Influenced by practice</td>
<td>Projects, and the practices of front line staff can have a strong influence on policy</td>
</tr>
</tbody>
</table>

(Keeley and Scoones, 1999).
The Policy Process

1. Agenda Setting
   Public attention focuses on a public problem or issue. Officials’ words and actions help focus attention.

2. Policy Formulation
   Policy makers in the legislature and the bureaucracy take up the issue. They create legislative, regulatory, or programmatic strategies to address the problem.

3. Policy Adoption
   Policy makers formally adopt a policy solution, usually in the form of legislation or rules.

4. Policy Implementation
   Government agencies begin the job of making the policy work by establishing procedures, writing guidance documents, or issuing grants-in-aid to other governments.

5. Policy Evaluation
   Policy analysts inside and outside government determine whether the policy is addressing the problem and whether implementation is proceeding well. They may recommend REVISIONS in the agenda, in the formulation of policy, or in its implementation.
Policy-Making Life-cycle

The Policy-Making Life Cycle

Agenda Setting

Policy Creation

Implementation

Monitoring
The Policy Process/Life-cycle

- Agenda setting
- Analysis
- Policy formulation/creation
- *Mobilization of political support*
- Policy implementation
- Program evaluation/monitoring
- *Policy change*
2.5 How does policy emerge?

- Policy making is rarely an “event”, it tends to emerge and evolve over time, subject to continuous re-interpretation.

- Timing of decisions *often* dictated by political considerations rather than state of *evidence*.
2.5 How Does Policy Emerge?

- Changes are driven by underlying beliefs about:
  - cause of problem, and effect of intervention,
  - social climate - what is popular, what is acceptable
  - power and influence of competing interests - who wins, who loses, who will fight, who will compromise

(Milio 1987, Evelyn DeLeew 1993)
2.5 How Does Policy Emerge?

Derived from balance between what is:

1. scientifically plausible (evidence based)
2. politically acceptable (fit with vision, balance of interests) and
3. practical for implementation
   - powers and resources available
   - systems, structures and capacity for action in place
   - feasible to take action - community engagement and acceptance
Evaluating Policy Ideas

- Effectiveness (likely achievements)
- Efficiency (greatest benefits at the least cost)
- Equity (fairness of benefits distribution)
- Political Feasibility (acceptability of proposal by stakeholders)
2.6 Public Opinion & Policy

- **Saliency** (public awareness)
- **Intensity** (degree of positive or negative feelings toward issue)
- **Stability** (opinion over time)
- **Potential** (although currently not salient, public may show concern toward issue in the future)
Range of Public Opinion

- Electoral participation
Part 3. Policy Stakeholder Analysis

3.1 Analyzing the Roles of Stakeholders - The Four “Rs”

3.2 Components of Policy Analysis

3.3 What is needed to get “community” into “policy”?
### 3.1 Policy Stakeholder Analysis

**Analysing the roles of stakeholders - The Four “Rs”**

<table>
<thead>
<tr>
<th>Rights</th>
<th>Responsibilities</th>
<th>Revenues &amp; rewards</th>
<th>Relationships</th>
</tr>
</thead>
</table>

**Formal Policy Actors**
- Elected officials
- Political appointees
- Legislative staff
- Career bureaucrats

**Informal Policy Actors**
- Organized interest groups
- Journalists
- Citizens
- Nongovernmental policy analysts
3.2 What are the components of policy analysis?

- **Social Capital**
- **Livelihood context**
- **Vulnerability strategies**
- **Livelihood options**
- **Policy process and actors**

**People-centred analysis**

- Policy measures
- Policy context
- Policy statement

**Policy-centred analysis**

- How policy influences people's livelihoods
- How people influence the policy process

The interface between policy and people, institutions, organisations, rules, regulations, and people.
3.3 What is needed to get “community” into “policy”?

- Public and media engagement in issues - more effective communication of evidence, including evidence of community priorities and preferences

- Effective public advocacy - to shift balance of power and influence competing interests

- Improved skills of the bureaucracy and among practitioners - policy development to implementation
3.3 What is needed to get “community” into “policy”?

- More timely information and improved access to available evidence in digested form

- Improved techniques for communicating and managing uncertainty
Group Exercise (Parts 2 and 3)

Discuss:

(i) What approaches, tools and techniques you use to influence policy?

(ii) What works?

(iii) If you can, please distinguish between different parts of the policy process: agenda setting, formulation, decision, implementation, monitoring)
Part 4. Evidence & Policy Formulation

4.1 The Use of Evidence in Policy Identification, Development and Implementation

4.2 Types of Evidence and How they are Used in Policy Making

4.3 Determining the Usefulness of the Evidence
Part 4. Evidence and Policy Formulation

4.4 A Practical Framework

4.5 Challenges to Bridging Research and Policy

4.6 Civil Society Organisations and the Use of Evidence
The Problem…

“policymakers seem to regard ‘research’ as the opposite of ‘action’ rather than the opposite of ‘ignorance’.”

Definitions

- **Research:** any systematic effort to increase the stock of knowledge

- **Policy:** a purposive course of action followed by an actor or set of actors
Factors which influence Policy

- Evidence
- Experience
- Judgement
- Resources
- Values
From Opinion-Based Policy to Evidence-Based Policy

- The integration of experience, judgement and expertise with the best available external evidence from systematic research.
- Involves a balance between professional judgement and expertise on the one hand and the use of valid, reliable and relevant research evidence on the other.
- Involves a shift away from opinion-based decision making to evidence-based decision making.
Why Make Public Policy More Evidenced-Based?

1. **Effectiveness** - ensure we do more good than harm

2. **Efficiency** - use scarce public resources to maximum effect

3. **Service Orientation** - meet citizen’s needs/expectations
Why Make Public Policy More Evidenced-Based?

4. Accountability - transparency of what is done and why

5. Democracy - enhance the democratic process

6. Trust - help ensure/restore trust in government and public services
What is Evidence-Based Policy?

- Evidence-based policy helps people make well-informed decisions about policies, programmes and projects...
- By putting the best available evidence from research at the heart of policy development and implementation
Opinion vs. Evidence

Opinion-Based Practice

Evidence-Based Practice

Increasing Pressure
Opinion vs. Evidence

- Evidence-based decision making draws heavily upon the findings of research (including social science research)
- Gathered and critically appraised according to explicit and sound principles of scientific inquiry.
Opinion vs. Evidence?

- The opinions and judgements of experts that are based upon up-to-date scientific research constitute high quality, valid and reliable evidence?

- Opinions that are not based upon scientific evidence, but are unsubstantiated, subjective and opinionated viewpoints do not constitute high quality, valid and reliable evidence?
Factors Influencing Policy Making

- Evidence
- Experience & Expertise
- Judgement
- Resources
- Values and Policy Context
- Pragmatics & Contingencies
- Lobbyists & Pressure Groups
- Habits & Tradition

??????
Evidence-Based Policy & Practice Pathway

Sourcing the Evidence:

<td>Results of consultation processes with networks/groups</td>
</tr>
<tr>
<td></td>
<td>Internet</td>
</tr>
<tr>
<td></td>
<td>Published documents (including policy evaluations &amp; statistical analyses)</td>
</tr>
</tbody>
</table>
## 4.2 Types of Evidence

| Ideas and Interests | Opinions & views: ‘expert knowledge’ of individuals, groups, networks (shaped by past personal and professional experiences, beliefs, values, skills) |
| Politics | Information relevant to the agenda of government |
| | Political risk assessment and saleability |
| | Opportunity |
| | Crises |
| Economics | Finance and resource implications |
| | Cost effectiveness or other forms of economic evaluation |
| | Opportunity Cost |

Source: Cabinet Office (1999a)
4.3 Determining the Usefulness of the Evidence

1. Accuracy:
   Is the evidence correctly describing what it purports to do?

2. Objectivity:
   - quality of the approach taken to generate evidence
   - objectiveness of the source
   - extent of contestation regarding evidence
4.3 Determining the Usefulness of the Evidence

3. Credibility:

reliability of the evidence and whether we can depend on it for monitoring, evaluation or impact assessments.

4. Generalisability:

is there extensive information or are there just selective cases or pilots?
4.3 Determining the Usefulness of the Evidence

5. **Relevance**: is evidence timely, topical and has policy implications.

6. **Availability**: The existence of (good) evidence.
4.3 Determining the Usefulness of the Evidence

7. **Rootedness**: Is evidence grounded in reality?

8. **Practicalities**: 
   - Whether policymakers have access to the evidence in a useful form and
   - Whether the policy implications of the research are feasible and affordable.
4.4 A Practical Framework

External Influences
Geopolitical, economic and cultural influences; donor policies, etc.

The Context – political, social and economic structures, political processes, institutional pressures, incremental vs radical change etc.

The Links between policy and research communities – networks, relationships, power, competing discourses, trust, knowledge etc.

The Evidence – credibility, the degree it challenges received wisdom, research approaches and methodology, simplicity of the message, how it is packaged etc.
A Practical Framework

External Influences
- Campaigning, Lobbying
- Scientific information exchange & validation

Political Context
- Politics and Policymaking
- Policy analysis, & research

Connecting Links
- Media, Advertising, Networking
- Research, learning & thinking

Evidence
-
Parallel Universes?
(or Policy Makers Constraints)

- Speed
- Superficiality
- Spin
- Secrecy

Vincent Cable – MP for Twickenham
Parallel Universes?
(or Policy Makers Constraints)

Speed:

- Policy makers are under chronic time pressure & are forced to process information quickly.
- This requires improvisation and also means that sometimes compromises have to be made.
- Occasionally, this leads to bad decisions.
Parallel Universes?  
(or Policy Makers Constraints)

**Superficiality:**

- Each policy maker has to cover vast thematic fields, and cannot possibly have in depth knowledge about every issue in those areas.
- They are therefore heavily dependent on the knowledge and integrity of the people who inform them.
Parallel Universes?
(or Policy Makers Constraints)

Superficiality:

- This raises difficult questions about who policy makers should turn to for advice, and how they can judge the advice given to them.
Parallel Universes?
(or Policy Makers Constraints)

Spin:

- In the political world, perception is very important.
- For example, even though evidence has shown an option is not the most cost effective way it may still be used if there is a strong public perception that it will improve the situation.
- Perception often guides political decisions.
Parallel Universes?
(or Policy Makers Constraints)

Secrecy:

- the question of how to relate to evidence that is secret.
- A recent example is Blair's memorandum on weapons of mass destruction in Iraq, which formed the basis of political decisions.
4.5 Challenges to Bridging Research and Policy

1. **Acceptability of Research Results** – If policymakers do not accept them, they will remain nothing better than a wish list. Researchers need to re-package their findings.

2. **Lack of Awareness** on the part of policy makers about the existence of policy relevant research, incapacity of over-stretched bureaucrats to absorb research, or policy makers being dismissive, unresponsive or incapable of using research.
4.5 Challenges to Bridging Research and Policy

3. *Timeliness* in carrying out research is important if its findings need to influence policy. Often times, a perfect solution that is late is a wasted effort.

4. *Accessibility and quality of data and information* - Depending on which data research is founded, and the credibility of the sources, results may be acceptable or rejected by the policymakers.
4.5 Challenges to Bridging Research and Policy

5. **Societal disconnection** of both researchers and decision-makers from those who the research is about or intended for undermines effective implementation.

6. **Donor Interests**: - When a research is donor funded, sometimes the agenda of the donor becomes a binding constraint on how much of influence can bear on government policy.
Agenda Setting:

- CSOs may use evidence to build momentum behind an idea until it reaches a ‘tipping point’.
- They may need to crystallize a body of evidence as a policy narrative to create a window for policy change.
- A key factor here is the way evidence is communicated.
4.6 Civil Society Organisations (CSOs) & Use of Evidence

Formulation:

- evidence can be an important way to establish the credibility of CSOs.
- the quantity and quality credibility of the evidence that CSOs use seems to be important to their policy influence.
Part 5.
Policy Implementation as a Process of Change Management & Innovation
Policy Implementation and the Management of Change & Innovation

- Fundamental to the transfer of evidence into policy and practice is **Diffusion**
- **Diffusion** is the process by which an innovation is communicated and adopted over time among members of a social system
- In this context the ‘innovation’ is the policy idea as well as the related evidence.
Policy Implementation and the Management of Change & Innovation

Diffusion theory helps us understand:

- how individuals within an organization receive, adopt, and adapt evidence and policies
- the organizational factors that constrain or facilitate the adoption or implementation of the evidence and policies
Organisational innovation is the adoption of an internally generated or purchased devise, system, policy, program, process, product or service that is new to the adopting organisation (Daft, 1982; Damanpour and Evan, 1984).

Innovation: an idea or practice that is perceived as new by an individual or unit of adoption. Van de Ven and Rogers (1988)
Policy Implementation and the Management of Change & Innovation

- **Compatibility and Complexity**: innovation characteristics most consistently related to the success of adoption and implementation.

- The *compatibility* of an innovation is the degree to which it is *perceived as being consistent* with existing values, past experiences and needs of the receivers of the innovation.
Policy Implementation and the Management of Change & Innovation

- **Compatibility** can be related to:
  - (1) how people think and feel about a technology
  - (2) how it fits operationally with what they are doing.
The more an innovation is perceived as being compatible with an organisation’s current systems, procedures, and values, the greater the likelihood of adoption and implementation (Kimberly and Evaniskov, 1981; Van de Ven and Pool, 1990).
Policy Implementation and the Management of Change & Innovation

- **Complexity** is the degree to which an innovation is perceived as being relatively difficult to understand and to use (Van de Ven and Rogers, 1988).

- While an innovation *may appear to be beneficial*, the organisation may not possess the necessary skill or resources to utilise the innovation.
The perceived complexity of an innovation is generally found to be negatively related to adoption and implementation (Van de Ven and Rogers, 1988; Tornatzky and Fleisher, 1990).

Perceived complexity has also been found to be negatively correlated to innovation diffusion (Premkumar and King, 1994).
5.1 Stages in the Process of Managing Change

AS IS ORGANIZATION

Policy Framework

TRANSITION ORGANIZATION

CHANGE

WORKERS

CHANGE TEAM

LEADERSHIP

PROCESS

INFORMATION FLOW

CULTURE

TO BE ORGANIZATION
5.2 Anticipating Resistance

- Resistance to leaving the current state
- Resistance to going through the delta state
- Resistance to the desired state
Model of Organizational Change

- **Unfreezing (Current State)**
  - Prepare those affected by change
  - Communicate reasons
  - Solicit feedback

- **Moving (Delta State)**
  - Training of those affected by change

- **Refreezing (Desired State)**
  - Routinization of the change
  - Becomes “second nature”
Resistance to leaving the current state

- Don’t see the need to change
- Can’t envision the desired state
- Don’t know how to change
- Feel that the change is a criticism of performance
- Would rather focus on a different change
- Don’t trust the change agents or sponsor
- Are too comfortable in the current state
- Experienced failed or painful change in the past
- Value current skills above new ones
Resistance to going through the delta state

- Have other priorities occupying their energy
- Don’t want a heavier workload
- Don’t think the organisation can make the transition
- Think that the cost is too high; the change is too disruptive or requires too much effort
- Feel that they are not involved sufficiently; the timing is bad or the reward is too low.
Resistance to the desired state

- Would prefer a different outcome
- Fear unknown outcomes/negative outcomes
- Feel that this change doesn’t solve the problem
- Feel that they won’t be able to learn the new way
- Can’t see the relevance of the change to their work
Organizational Change *Roadmap*

1. Establish a sense of urgency.
2. Create the guiding coalition.
3. Develop a vision and strategy.
4. Communicate the change vision.
5. Empower employees for broad-based action.
7. Consolidate gains and produce more change.
8. Anchor new approaches in the culture. (John Kotter)
The Framework for Change: Head, Heart & Hands

Change takes place in three arenas

**Why should I change?**

**What’s in it for me?**

**What do I do differently?**

**Thinking & Understanding**

**Motivation/ Emotion**

**Behavior**

**HEAD**

**HEART**

**HANDS**
5.3 Creating Safety Nets

- Communication Plan
- Learning Plan
- Reward Plan
i) Communication Plan

- Why the change is happening
- **What** things are going to look like after
- **How** will it happen and
- **How** will it impact on them
ii) Learning Plan

- Identifies the skills, knowledge and attitudes required by each target group throughout the change

- Establishes:
  - when training is needed
  - how will it be delivered and assessed
  - by whom and
  - at what cost
Learning Plan

What targets need to know

To understand the change
To survive in the delta state
To operate in the desired state

What sponsors need to know

What change agents need to know
iii) Reward Plan

- Identify which behavior should be recognized and rewarded in the delta state and by what means
- Develop and Implement a new performance measurement strategy for the desired state
5.4 Knowledge into Action…

Common-Sense/Sensible Application

Data into Information into Knowledge into Wisdom into Values into Desired Behaviour & Action

- DATA
- INFORMATION
- KNOWLEDGE
- WISDOM
- Values
- Desired Behaviour & Action

Processing → Understanding
Thank You!
