Enterprise Architecture for Connected E-Government: Practices and Innovations

Pallab Saha (National University of Singapore, Singapore)

Enterprise Architecture is the inherent design and management approach essential for organizational coherence, leading to alignment, agility, and assurance. A structured enterprise architecture approach is often used to plan and implement efficient and effective transformation efforts. However, the strongest driver for Enterprise Architecture is to improve service delivery and overall performance within the organization’s business segments.

Enterprise Architecture for Connected E-Government: Practices and Innovations addresses the gap in current literature in terms of linking and understanding the relationship between e-government and government enterprise architecture. Within this broader context, the focus is on uncovering and comprehending the relationship between government enterprise architecture and connected government. Perfect for government CIOs, IT/IS managers, chief architects, analysts, and designers seeking better, quicker, and easier approaches to respond to needs of their internal and external customers.

About Dr. Pallab Saha

Dr. Pallab Saha is with the National University of Singapore, Institute of Systems Science. His current research, consulting, and teaching interests include Enterprise Architecture (EA) and Governance. Dr. Saha has published three books, the Handbook of Enterprise Systems Architecture in Practice; Advances in Government Enterprise Architecture; and Coherency Management—Architecting the Enterprise for Alignment, Agility and Assurance.
